67636V 35 J07 Q75 Q78 ALEK/07.02.72 J8-C4. ALEKSANDROV A A ET AL SU -407-160 07 02 77 Sti 744565 102 04.741 F25b 19/04 F25d 07 F28d 15 Flat heat tube for refrigeration - conical recesses on opposite sides of body welded together at apexes The tube comprises a body of rectangular cross-section with capillary-porous material on the inside. In order to r ||||||| 111111174 widen the range of working temps, conical recesses are made on opposite sides of the body and are joined together at their apexes e.g. by welding. When heat is brought to evaporating zone 12, the fluid evaporates from capillary-111111111 Hiliiii porous material 3 and the vapour goes along vapour channel 5 into condensation zone 14 from which the heat is taken. The vapour condenses, settles in the form of condensate on

material 3, and then returns via transport zone 13 to

evaporating zone 12.
